

## What is Medication Reconciliation?

### Exercise:

Think about the patient most recently admitted to your service and answer the following questions:

- Did the patient or family bring their medications to the hospital?
  - Were the medications properly labeled and stored in their original containers or a medication compliance aid (e.g., dosette)?

- Did the patient have a medication list?
  - Was the list from another healthcare provider or was it written by the patient?
- Did you have to contact the patient's family doctor or pharmacist to clarify something about their medications?
  - What information did you need and were you able to get it?
