Because of you, the School of Medicine has a home.

It has been five tremendous years of medical education since the School of Medicine building opened its new doors on September 22, 2011. At the time the $77-million facility opened, we promised that the School would be an expanded facility hosting a state-of-the-art teaching clinic, lecture halls and large teaching spaces, simulation labs, surgical/technical skills labs, small-group and seminar rooms, info-commons and virtual learning spaces, and student study spaces. It has become so much more.

The School of Medicine Building offers a facility that engages learners, inspires innovation and advances care. An architecturally stunning addition to campus, what happens on the inside is even more impressive.

Generations of Queen’s medical students will hone their clinical skills in a facility set up as a real-life clinic. They will build and test their technical skills on a second floor devoted to simulation with mannequins and other equipment. Foundation sciences such as anatomy, biochemistry, microbiology, physiology and pharmacology have dedicated space on the basic science floors. The School of Medicine building was long overdue and one that the entire Faculty of Health Sciences is very proud of.

Much more than a building, it has become a home for our students.

Thank you for helping us to fulfill our promise of building the School of Medicine a home.

"For decades, the School of Medicine carried a strong identity on campus but lacked a home: a unifying and physical presence to which the School could be associated. The new School of Medicine building has, at long last, changed that. During the planning meetings, Dr. Tony Sanfilippo was adamant that the identity of this building be inextricable beyond a sign at the entry, that the student experience be at the forefront of the facility. He wanted us to be seen. Seen in groups, seen as classes, seen at work and study, and above all, to be seen together building and preserving the sense of community that continues to be so strong within the Queen’s School of Medicine."

Dr. Karmen Krol, Meds 2011

"The School of Medicine Building is a state-of-the-art educational facility. It allows our students and faculty to engage medical education in a variety of formats, taking advantage of modern approaches, and their considerable imaginations. However, it’s much more than that: it’s become the central focus of our medical school. It’s a place where our students come together with each other, with their faculty, and curricular leaders to learn together. It makes real the goal of providing a truly unique immersion experience for our students, where they’re able to immerse themselves in their education and truly grow, not just at students, but as novice physicians. The School of Medicine Building is the heart and home of medical education at Queen’s."

Dr. Anthony Sanfilippo, Professor; Associate Dean, Undergraduate Medicine Program

"The building has provided our students and faculty with a tremendous facility on which to learn and teach. It is always amazing to see a full class of students switch gears from listening to the teacher at the front of the room to working together as a team, solving case-based problems. The design, layout and technology that have contributed our main large classrooms allow this to happen seamlessly and have really transformed the experience of a generation of students."

Dr. Lindsay Davidson, Orthopaedic Surgeon, Associate Professor, Director: Teaching, Learning and Integration Committee

TYPICAL WEEK IN THE LIFE OF A MEDICAL STUDENT

MONDAY
As a first-year medical student, we watch the class file into the lecture hall at 8:30 a.m., on the ground floor. We know we’re in for a long day of class. Two lecture theaters are equipped with the latest acoustic and audiovisual technologies, the rooms can accommodate lectures as well as group learning sessions.

Later, we can be found upstairs in the David M. C. Walker Atrium at lunch hour, and after that we gather with a Faculty tutor for small group learning. The stunning Atrium of the building bears, in fitting tribute, the name of Dr. David M.C. Walker. His perseverance, leadership and dedication to the School, to the Queen’s Medical Community, and to our Profession restored the foundation upon which all other efforts flourished in order to make this facility a reality.

TUESDAY
Second-years start the morning in the ground floor lecture hall, room 132a. Over lunch, some of us play foosball in our basement lounge space. We’ll have clinical skills in the afternoon at the Clinical Teaching Centre, learning to focus our histories and physical exams.

The Clinical Teaching Centre has 20 examination rooms equipped and configured to simulate an outpatient clinic. Each room has a one-way glass and access to an observation area, audio-visual capabilities for remote viewing and recording, plus a fully wireless environment.

WEDNESDAY
The middle of the week for the first-year medical student means an afternoon of Anatomy and Histology in the third-floor Anatomy Learning Centre. Here we learn from both prosected cadavers and a variety of anatomical models found in the museum section of the lab. The Anatomy Museum contains hundreds of encased wet anatomical specimens spanning the entire body and is considered to be the finest in Canada. The versatility of this new space comes with the ability to organize and reorganize the museum with ease so that the entire spectrum of learning materials can be used in combination, simultaneously. On average, 22 hours of laboratories are offered each week with 60 students per lab.

THURSDAY
After class some of us gather in room 021 for an interest group talk. We’ll learn about a variety of medical fields and careers throughout the year and have presentations from Faculty and residents.

Outside the lecture spaces, students can gather in one of the 30 small rooms throughout the building for group studying sessions. We finish class mid-morning and go up to the second floor Lantern Lounge to sip a coffee while overlooking Summerhill field and campus. On the way to the Lantern Lounge, we pass the Clinical Simulation Centre (CSC) where some of our classmates are taking a course on resuscitation as part of their Emergency Medicine rotation.

The CSC is a Royal College accredited centre that runs 1150 sessions per year ranging from undergraduate medical and nursing student technical skills classes, through residency bootcamps and nightmare scenarios to CME refreshers for area health care professionals.
