Joundi, R.A. Enhancing Motor Performance in the Healthy and Parkinsonian Brain: Adaptation, Oscillations, and Electrical Stimulation. Doctoral Dissertation, Oxford University, UK. The thesis explores the neurophysiological underpinnings of motor activity in humans, with a focus on Parkinson's disease. Experiments involved recording of electrical activity from the basal ganglia of Parkinson's patients with implanted deep brain electrodes, as well as using invasive and non-invasive electrical stimulation to improve motor output. The main thrust of the work demonstrates the importance of neuronal oscillations in the generation of movement.
